Dear Madam or Sir;

I was just reading how the European Union has now approved at least 23 methods as alternatives to live animal testing for drugs, chemicals, and personal products, while the ICCVAM has approved only 6 for use here in the United States. Many of these humane new methods are more reliable than old fashion Draize skin irritation tests and the like.

Please approve more of these modern alternative testing procedures for use in the United States so that we can move away from live animal testing. Hundreds of thousands of animal lives will be saved every year with no loss of information or test reliability.

Thank you for your time and consideration. I would appreciate a reply.

Sincerely;

Lori Albee
